Pedagogy of Science

What is Science?

Perhaps, India may be the only nation with a constitutional provision as fundamental duty 'to develop scientific temper' among its citizens. Article 51A (h) is: "To develop the scientific temper, humanism and the spirit of inquiry and reform". This reflects how we thought about Science. For us, Science is neither a pedagogical discipline nor a group of certain subjects. We have perceived

Science as a way of life with rational thinking. This feeling and understanding should be inculcated among learners since childhood so that they can perceive Science as a part of their life. Our scientific traditions are ancient and our perception about Science is associated with the notions like logic, rationality, truth, knowledge and intelligence

Check Your Progress

Note: a) Space is given below to write your answer.
b) Compare your answer with the one given at the end of this Unit.
1) Do you agree that Library Science is a Science? Give arguments in support of your answer.

Understanding Nature of Science

Generally speaking, nature of Science is a fundamental domain for guiding Science teachers in accurately portraying Science to learners. Science learners need to know not only facts/concepts but also about the processes through which this knowledge is generated. Thus, appropriate knowledge of nature of Science can help a teacher in enhancing her ability to implement conceptual changes and also in understanding learners' learning (Matthews, 1994). Understanding nature of Science is important because if your understanding and the Philosophy of Science is not congruent with the current interpretations of the nature of Science, you will not be able to do justice to explanations and interpretations of scientific issues in scientific terms.
