4. MATERIAL AND PROCEDURAL SUPPORTS

Statistical Package for the Social Sciences (SPSS):

SPSS (Statistical Package for the Social Sciences), also known as IBM SPSS Statistics, is a software package used for the analysis of statistical data. Although the name of SPSS reflects its original use in the field of social sciences, its use has since expanded into other data markets.

GBYSSM purchased for licensed SPSS that aids the students and even research scholars for analysis of data in social sciences.

Google Meet Subscription:

During the time of COVID and later the need to shift to online teaching, meeting and conferences created a need for such platforms which can be used successfully to organize large gatherings, conference, meetings and classes, thus GBYSSM paid for Google Meet subscription. This platform helps to connect via internet and join various national and international programs as well as organize the programs.

Urkund software for Plagiarism Checking

URKUND is a completely automated system against plagiarism (Anti-plagiarism software) and is being successfully used at DAVV University. URKUND's system checks all documents against three central source areas:

a. The Internet

b. Published material such as Journals, Books etc.

c. Previously submitted student material (e.g. memoranda, case studies and examination works)

URKUND Plagiarism Detection Software has been selected by INFLIBNET Centre (Inter University Centre of UGC) under the aegis of Ministry of HRD to enhance quality and prevent plagiarism in research/academic publications. The same software credentials are with Dr. S. K. Tiwari, Principal of GBYSSM. This helps to check the originality of dissertation, research papers and other academic work of students and research scholar.

Braille Material/Slate

The slate and stylus for Braille are the writing tools which are available at GBYSSM Library. By using the slate and stylus a blind student can write like writing with pen and paper. This system allows student to emboss dots on their paper by hand. The Braille slate at library helps students by providing them with material which they can use for the studies.

Teleprompter for Recording Purpose

GBYSSM during the COVID period felt requirement for up-dation of Technology and Gadgets at the institute. At that time other gadgets like camera and microphone were purchased. Later a Teleprompter was also ordered as per the need of the educational scenario.

A teleprompter, also known as an autocue, is a display device that prompts the person speaking with an electronic visual text of a speech or script. It is similar to using cue cards. The screen is in front of, and usually below, the lens of a professional video camera, and the words on the screen are reflected to the eyes of the presenter using a sheet of clear glass or other beam splitter, so that they are read by looking directly at the lens position, but are not imaged by the lens. Thus the gadget will help in recording sessions and further to develop MOOCS and other e-resources.
